

GLOBAL FOOTPRINT & CUSTOMER SERVICE

For over 85 years our products have been the choice for securely closing metal and plastic containers. This market leadership has been the foundation for our global footprint today. Our global footprint of Tri-Sure® sales, distribution and support centers, consists of support engineers who have been comprehensively trained in all aspects of our products and their applications.

Tri-Sure®
MORE THAN CLOSURES

Global Footprint & Customer Service

Partly based on outstanding and innovative design of all the products in our portfolio and partly because of our outstanding commitment to customer support you can count on us throughout the world. With ever increasing pressure on manufacturers and distributors to protect their products from pilferage and to avoid environmental damage, our products give complete reassurance.

Application support

For the application of our metal Tri-Sure® closures into drums we have a variety of insertion dies available. Tri-Sure® support engineers can bring the company's global experience for all types of drum production and filling lines. From manual to automated lines, and for all types of content, our expertise is readily available.

Design support

When it comes to our product range for plastic containers our support extends beyond supplying customers just a plastic plug.

Since the performance of the container will largely depend on the interaction between the threaded-neck of the container and the plug, it is essential to create a perfect combination.

We can provide all the necessary information needed for the design of a recommended drum-neck in line with the relevant industrial standards. The same is true for the range of Plasticap™ screw-caps we can supply.

Insertion dies, closing tools and accessories

Our range of closures is enhanced by an extensive range of Insertion dies, closing tools. These and the special accessories we supply ensure that all your drum and container closing needs can be met worldwide by a single supplier.

Advantage

- ✓ Global supply.
- ✓ Technical support and advice.
- ✓ Total cost of ownership.
- ✓ Spare parts for dies.
- ✓ Tooling for opening and closing.
- ✓ Rush-orders.
