

FOOD SAFETY

Ensuring the safety of food throughout the whole supply chain is key to protect us from foodborne illness.

At Tri-Sure® we have set the quality standard for closure systems that are used in food packaging throughout the world.

Tri-Sure®
MORE THAN CLOSURES

Food Safety

Food safety

Food safety is the handling, preparation, and storage of food in ways that protect us from foodborne illness. Foodborne illness is nearly 100% preventable if food is handled safely during the whole supply chain.

The role of packaging

Packaging plays a crucial role in the overall food safety. As food distribution networks globalize, now more than ever, protecting food from contamination such as micro-organisms, pests and other contaminants is vital.

Our solution

At Tri-Sure®, we believe it is our obligation to ensure that our products and services are safe in every aspect. This covers the full spectrum from creating a safe local workplace to protecting the environment worldwide.

We recognize the growing need for safe closures when it comes to food contact. We work closely with our customers to provide them with the safest packaging solutions.

Our manufacturing processes are adhering to the global industry standards (e.g. ISO, FSSC22000-2011, FDA, GFSI). Choose our certified closures and gain worldwide acceptance and recognition by food manufacturers and retailers.

Implementations and routines

We continually improve our manufacturing facilities to ensure the best quality and hygienically manufactured closure solutions.

Some examples of our ongoing efforts are access security of our sites, double doors opening, coated floors and walls, internal training of factory workers and management, Good Manufacturing Process (GMP), HACCP Studies, risk analysis from purchase to shipment.

Full customer support

For over 85 years our products have been the choice for securely closing metal and plastic containers. This market leadership has been the foundation for our global footprint today. Our network of sales, distribution and support centers, consists of support engineers who have been comprehensively trained in all aspects of our products and their applications.

Advantages

- ✓ Improve your product integrity.
- ✓ Better access to markets.
- ✓ Reduce food safety risks.
- ✓ Higher customer confidence and familiarity.
